DETAILED ACTION

Claims 1-27 are pending.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-14 and 18-21, drawn to pharmaceutical composition comprising an anticholinergic of formula 1, depicted in claim 1, a corticosteroid, and a betamimetic, classified in class 514, subclass 212.01.
- II. Claims 22-27, drawn to pharmaceutical aerosol formulations comprising an anticholinergic of formula 1, depicted in claim 1, a corticosteroid, and a betamimetic, classified in class 424, subclass 45.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because patentability of the combination is based upon the anticholinergic of formula 1 in combination with a corticosteroid (b) and a betamimetic (c). The subcombination has separate utility, such as an aerosol pharmaceutical formulation in admixture with a hydrofluoroalkane propellant administered by inhalation through the use of an inhaler (e.g. metered-dose inhaler). It is accepted in the art that one may have patentably distinct forms of similar pharmaceutical compositions comprising the same active agent. For example, patentably distinct forms of

Art Unit: 1616

pharmaceutical compositions comprising insulin as the active agent are known, such as parenteral (e.g. injectable) and inhalation (e.g. aerosol) formulations.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Note: If Group II is elected; claims 15 and 17 will be examined in so far as they relate to an inhalable pharmaceutical composition comprising a propellant in admixture with the active agents recited in claim 1, excipient of claim 2, and dependent claims further limiting said active agents and excipient, respectively.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

A telephone call was made to Mr. Timothy Witkowski, Esq. on May 5, 2006 at approximately 2 pm to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
